

02 – Functional Requirements

1. Document Purpose

Elevator Gate is a self-directed portfolio project and does not have a real client.

The requirements in this document are defined based on:

- The project brief.
- Target audience needs.
- Competitor research.
- Common practices in elevator service company websites.
- The technical and time constraints of the MVP.

For this project, the developer acts as the Product Owner and is responsible for approving the requirements.

2. User Roles

The website will include the following user roles:

2.1 Website Visitor

A visitor is any person browsing the public website without logging in.

The visitor can:

- Browse the homepage.
- View information about the company.
- View the company's elevator services.
- View completed projects.
- View the cities and areas served by the company.
- Submit a general contact request.
- Submit an elevator maintenance request.
- Contact the company through WhatsApp, phone, or email.
- Change the website language if Arabic and English are supported.

2.2 Website Administrator

The administrator is the company employee responsible for managing the website through the administration dashboard.

The administrator can:

- Log in securely to the administration dashboard.
 - Manage website pages and content.
 - Add, edit, publish, or delete services.
 - Add, edit, publish, or delete projects.
 - View contact form submissions.
 - View maintenance request submissions.
 - Update company contact information.
 - Update social media and WhatsApp links.
 - Upload and manage images.
 - Manage blog posts if the blog feature is approved.
 - Log out securely.
-

3. Public Website Functional Requirements

FR-01: Homepage Display

The system shall display a homepage that introduces Elevator Gate and provides quick access to the company's main services.

The homepage shall include:

- A main hero section.
- A short company introduction.
- Featured services.
- Selected projects.
- Reasons to choose the company.
- A clear call-to-action.
- Contact information.
- A link to submit a maintenance request.

FR-02: About Company Page

The system shall display an About page containing information about Elevator Gate.

The page may include:

- Company overview.
- Mission.
- Vision.
- Company values.
- Experience and qualifications.
- Service coverage areas.

FR-03: Services Listing

The system shall display a list of elevator services offered by the company.

Each service shall include:

- Service name.
- Short description.
- Service image or icon.
- Link to the service details page.

FR-04: Service Details

The system shall provide a separate details page for each service.

The service details page shall include:

- Service title.
- Detailed description.
- Service image.
- Benefits or features.
- Call-to-action.
- Link to contact the company or request the service.

Possible services may include:

- Elevator installation.
- Elevator maintenance.
- Elevator modernization.
- Elevator repair.
- Safety inspection.
- Emergency elevator support.

The final service list must be confirmed with the client.

FR-05: Projects Listing

The system shall display the company's completed or ongoing projects.

Each project card shall include:

- Project title.
- Main project image.
- Project category.
- Project location.
- Short description.

- Link to the project details page.

FR-06: Project Details

The system shall provide a separate page for each project.

The project details page may include:

- Project title.
- Project description.
- Project location.
- Project category.
- Service provided.
- Project completion date.
- Image gallery.
- Client name, if approved for publication.

FR-07: Project Filtering

If project categories are approved, the visitor shall be able to filter projects by category.

Possible categories may include:

- Residential buildings.
- Commercial buildings.
- Government facilities.
- Elevator installation.
- Elevator maintenance.
- Elevator modernization.

FR-08: General Contact Form

The system shall provide a general contact form.

The form shall include:

- Full name.
- Phone number.
- Email address.
- Subject.
- Message.

The system shall validate required fields before submitting the form.

After successful submission, the system shall display a confirmation message.

The submitted request shall be stored in the database and made available to the administrator.

FR-09: Maintenance Request Form

The system shall allow customers to submit an elevator maintenance request.

The form may include:

- Customer name.
- Phone number.
- Email address.
- Building name.
- Building type.
- City.
- Elevator type.
- Elevator brand, if known.
- Number of elevators.
- Problem description.
- Urgency level.
- Preferred contact method.
- Image or document attachment.

The final form fields must be confirmed with the client.

After successful submission:

- The system shall display a confirmation message.
- The request shall be stored in the database.
- The request shall be visible in the administration dashboard.
- An email notification may be sent to the company if email notifications are approved.

FR-10: Direct Contact Options

The system shall display direct contact options throughout the website.

These options may include:

- Phone call button.
- WhatsApp button.
- Email link.
- Contact page link.

On mobile devices, the phone number shall be clickable.

FR-11: Location and Service Areas

The system shall display the cities or regions where Elevator Gate provides services.

The system may display:

- A list of cities.
- Company address.
- Google Maps location.
- Map directions link.

The final service coverage areas must be provided by the client.

FR-12: Client or Partner Logos

If approved by the client, the system shall display client or partner logos.

The administrator shall be able to:

- Add a logo.
- Edit the client or partner name.
- Change the display order.
- Remove a logo.

FR-13: Language Selection

If the website is bilingual, the system shall allow visitors to switch between Arabic and English.

The system shall:

- Display Arabic content using a right-to-left layout.
- Display English content using a left-to-right layout.
- Maintain the selected language while the visitor browses the website.

This requirement is pending client confirmation.

FR-14: Blog

If the blog feature is approved, the system shall provide a blog section.

Visitors shall be able to:

- View published articles.
- Open an article details page.
- Browse recent articles.
- Browse articles by category.

The administrator shall be able to:

- Create articles.
- Edit articles.
- Save articles as drafts.
- Publish articles.
- Upload article images.
- Delete articles.
- Manage article categories.

This requirement is pending client confirmation.

4. Administration Dashboard Requirements

FR-15: Administrator Authentication

The system shall provide a secure administrator login page.

The administrator shall log in using:

- Username or email.
- Password.

The system shall prevent unauthenticated users from accessing the administration dashboard.

FR-16: Service Management

The administrator shall be able to:

- Add a new service.
- Edit an existing service.
- Upload a service image.
- Publish or unpublish a service.
- Delete a service.
- Change the service display order.

FR-17: Project Management

The administrator shall be able to:

- Add a new project.
- Edit an existing project.
- Upload a main project image.
- Upload multiple project images.
- Assign a project category.

- Publish or unpublish a project.
- Delete a project.
- Change the project display order.

FR-18: Contact Request Management

The administrator shall be able to:

- View all contact requests.
- Open request details.
- View the customer's contact information.
- Mark a request as new, reviewed, or completed.
- Delete a request if necessary.

FR-19: Maintenance Request Management

The administrator shall be able to:

- View all maintenance requests.
- Open request details.
- View uploaded attachments.
- Filter requests by status.
- Filter requests by city or urgency.
- Update the request status.
- Add internal notes.
- Mark a request as completed.

Possible request statuses include:

- New.
- Under review.
- Contacted.
- Scheduled.
- Completed.
- Cancelled.

FR-20: Website Content Management

The administrator shall be able to update selected website content, including:

- Company overview.
- Mission and vision.
- Contact information.
- Company address.
- Phone numbers.
- Email address.

- WhatsApp number.
- Social media links.
- Homepage headings and descriptions.
- Service areas.

The exact editable content must be confirmed with the client.

FR-21: Media Management

The administrator shall be able to upload and manage website images.

The system shall:

- Accept supported image formats.
- Reject unsupported file formats.
- Limit file size.
- Store images securely.
- Allow the administrator to replace or delete images.

FR-22: Dashboard Summary

The administration dashboard should display a summary of recent website activity.

The dashboard may include:

- Number of new contact requests.
- Number of new maintenance requests.
- Number of published services.
- Number of published projects.
- Recent submissions.

5. Form Validation Requirements

FR-23: Required Field Validation

The system shall prevent form submission when required fields are empty.

FR-24: Email Validation

The system shall verify that email addresses use a valid format.

FR-25: Phone Number Validation

The system shall validate the phone number format.

The final accepted phone formats shall be defined according to the client's target customers in Saudi Arabia.

FR-26: File Upload Validation

The system shall validate uploaded attachments based on:

- File type.
- File size.
- File name.
- Security rules.

FR-27: Submission Confirmation

After successfully submitting a form, the system shall display a clear confirmation message.

If the submission fails, the system shall display an error message without deleting the entered form data.

6. Search and Navigation Requirements

FR-28: Main Navigation

The system shall provide a clear navigation menu containing links to the main website pages.

The navigation may include:

- Home.
- About Us.
- Services.
- Projects.
- Blog.
- Maintenance Request.
- Contact Us.

The final navigation structure must be approved by the client.

FR-29: Footer Navigation

The website footer shall include:

- Important page links.
- Contact information.
- Social media links.
- Copyright information.
- Privacy Policy link.
- Terms and Conditions link, if required.

FR-30: Search Function

If approved, the system shall allow visitors to search website content.

Search results may include:

- Services.
- Projects.
- Blog articles.

This requirement is optional.

7. Notifications

FR-31: Administration Email Notifications

If email notifications are approved, the system shall send an email notification to the company when:

- A contact form is submitted.
- A maintenance request is submitted.

FR-32: Customer Confirmation Email

If approved, the system shall send a confirmation email to the customer after submitting a request.

The confirmation email may include:

- Customer name.
- Request reference number.
- Submission date.
- Expected next step.
- Company contact information.

This requirement is pending client confirmation.

8. Error Handling

FR-33: Page Not Found

The system shall display a custom 404 page when a visitor requests a page that does not exist.

FR-34: Server Error

The system shall display a user-friendly error page when an unexpected server error occurs.

Technical error details shall not be displayed to public users.

FR-35: Invalid Form Submission

The system shall display clear validation messages next to invalid form fields.

9. Pending Client Decisions

The following requirements cannot be finalized until the client provides confirmation:

- Whether the website will support Arabic only or Arabic and English.
 - Whether maintenance requests will be stored only or also sent by email.
 - The exact maintenance request fields.
 - Whether customers can upload images or documents.
 - Whether every service will have a separate page.
 - Whether projects will have categories.
 - Which project details can be published.
 - Whether client names and logos can be displayed.
 - Whether the website will include a blog.
 - Which content the administrator can edit.
 - Whether the website requires an internal search function.
 - Whether customers will receive automatic confirmation emails.
 - The cities and regions served by the company.
 - The official company email, phone number, WhatsApp number, and address.
-
